

## Accessories for Airline Systems

At Total Protection we are able to offer a wide range of accessories and hose for all types of applications.

### Air Quality Testing

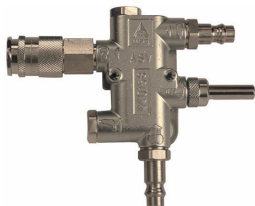

The latest generation of Safe-Air Testers make accurate air quality testing even easier to complete, ensuring compliance with the mandatory requirements of COSHH L5. The F4000 and the F4001, which are designed for low and high pressure compressed-air respectively, test air to the requirements of EN12021.

### Supply Hose

Designed to operate with Mobile Breathing Air Compressors, Factory Airlines, Long Duration Cylinder Sets and Filter Cabinets as well as a range of other industry standard equipment. We can offer a range unique breathing-air hoses which all conform to EN270. The lightweight virtually odour free PVC hoses are tested to kink, pull and crush criteria and include anti-static versions with a Hytril inner lining to inhibit bacterial growth.

As standard, breathing air hoses are fitted with CEJN type connections but other couplings can be fitted on application.

### Automatic Switch Valve

The ASV connects a compressed airline to a short duration set such as the BD Mini. The ASV ensures a continuous supply of air, by activating the air in the cylinder of the BD Mini in the event that the airline source fails.
