

Scott Modulair Airline Trolley

The Scott Modulair is a compact, easy to use airline trolley system designed to provide portable clean air in restricted access areas. Versatile and robust, it consists of a lightweight stainless steel hose reel unit and cylinder frame that can be used independently or together. The frame is designed to carry a pair of cylinders and, where required, an additional frame can be vertically stacked to allow connection of up to four cylinders. This, in conjunction with proven 300 bar high performance pneumatics delivering up to 1000 litres of breathing air per minute, permits four people to work at the same time. Long duration operation is made simple through adjustable cylinder bands and high pressure cylinder connectors to accommodate a variety of cylinder sizes at both 200 and 300 bar. Non-return bleed valves fitted to the cylinder connectors enable cylinders to be replaced independently for continuous operation. To safeguard against any drop in air supply pressure the Modulair can be fitted with a medium pressure warning whistle or a DS4 (automatic distress signal unit) for both audible and visual alarms if the airline supply pressure falls below 3.8-4.1 bar (55-60 psi). In either case, the operation of the alarm informs safety rescue personnel to switch over to the reserve air supply, change cylinders or initiate evacuation procedures as appropriate.

Key Features

- Pressure reducer systems utilise the same robust and proven technology as Sabre SCBA
- Welded stainless steel for robustness and corrosion resistance
- Failsafe pneumatic system
- Compact and portable
- CE marked to EN139
- Hose reel will hold 90 metres of PVC or 60 metres of anti-static hose

The Modulair is used in conjunction with the Sabre Flite, a positive pressure airline breathing apparatus with the option of a 10, 13 or 15 minute compressed air cylinder supply for escape from the most hazardous environments. Ideal for working in confined spaces as the robust design has been proven in some of the most arduous working environments including offshore oil and gas production.
