

## Radiodetection RD2000 Super CAT

A high performance, application specific cable avoidance tool. Buried services utilise multiple materials and sizes. The operator needs to not only locate the particular pipe or cable but those of other utilities repeatedly with speed, accuracy and ease, whilst operating in constrained areas. Radiodetection has recognised that even locating with 2 active frequencies can be limiting, so with three active frequencies the RD2000 addresses the broad needs of all the utility sectors. Depth readout is provided and StrikeAlert is available as an option

### Features:

- **Precision Locate** – Accurate pinpointing through quick meter response and real sound with depth
- **Optimised Locate** – Effective operation even in congested sites with unwanted interference
- **3 Active Frequencies** – Optimised locating whatever the utility or pipe material (metallic or non-metallic with trace wire), large or small
- **StrikeAlert™** – Alerts the user to the presence of shallow power cables
- **Easy to use 1 Watt Transmitter** – provides active locate signals via direct connect, cable clamp or induction

Specialists in Safety: Cable Location & Avoidance
