

Sabre Portaflow Oxygen Therapy Unit

The GCE Sabre Medical Portaflow, portable medical oxygen delivery system is suited for immediate care or mobile oxygen therapy. The unit includes a cylinder, regulator and oxygen therapy mask. A feature of the Portaflow is that the regulator is permanently married to the cylinder, providing a user friendly, robust and low profile unit when compared with separate cylinder and regulator options. The regulator incorporates a non-return charging port and can either be refilled by reputable medical oxygen providers or for emergency use by decanting from larger cylinders.
