

Type 300C

The Type 300C luminary is a lightweight, compact and flameproof work light. It is portable and extremely reliable, requires virtually no maintenance and is available with a choice of light outputs.

The luminary consists of a polycarbonate tube manufactured with cemented aluminium bushes at either end. These bushes form with their mating parts and is connected together by an internal back spine and tie bar. The compact fluorescent tube is connected directly to an inverter and the free end is secured in place by a low profile lamp holder. External shrouds provide means of support for the moulded suspension hooks secured to the shrouds by nylon screws and nuts. Electrical connection is via a 20mm threaded entry where a 3 core flexible cable is fitted through a suitable BASEEFA approved EExd flameproof cable gland.

The Type 300 is also available in a linkable 'Festoon' version.

- Encapsulated for increased Safety
- ATEX II 2G EExd IIB T5
- Moulded Suspension Hooks
- Approved by BASEEFA
