

The Management and Supervision of Work at Confined Spaces

A three day course for any person who has responsibility for planning safe systems of work, after risk assessment, for others entering confined spaces, uses permits to work as part of a safe system and is appointed by the employer to be the Responsible or Authorising Officer responsible for confined spaces and/or implementing/maintaining the employer's confined spaces policy.

Duration: 3 Days

This course will cover:

- A review of the requirements of the Confined Spaces Regulations 1997
- How to interpret and apply National Standards to Confined Space working
- How to undertake risk assessments of work in confined spaces
- How to develop, communicate and install safe systems of work and safe methods of work at confined spaces
- How to work with permits to work and their control features
- How to select, install and maintain appropriate control measures including hygiene procedures for standard and non standard entries
- How to understand the mechanisms of atmosphere testing, monitoring and ventilation procedures.
- How to select – as appropriate – gas monitoring or testing equipment, harness, hoists, winches and all arrest systems and escape or working breathing apparatus.

Training Information:

The practical content of this course involves table-top exercises and a case study however delegates wishing to use equipment in simulated confined space exercises will have an opportunity during the course to do so.

This element will only allow the delegate to experience hands on equipment familiarisation but will not give competency to enter or work in confined spaces.

Training Certification:

A certificate of attendance will be awarded on completion of the course and valid for three years. Further assessment will be required to gain City & Guilds accreditation.

Accommodation:

Local accommodation can be pre-booked from £35.00 per night
